

Businesses Need Solutions

At Vulcan Logic, we are committed to providing our clients with the highest level of computer service possible. For over a decade we have invested in the future of our clients by providing them with competitively priced products, professional services, expert service and quality support.

We recognize that no two businesses are alike, and will not try to push cookie-cutter solutions on our clients. We'll research your needs, consider each aspect of your business and provide you with a complete turnkey solution that addresses your specific requirements and budget.

Vulcan Logic has everything you need to provide your business with complete system integration and IT solutions. We can handle all your IT needs, from hardware to software to systems design and consulting.

We Can Help

Vulcan Logic can help your company:

- Manage and protect your IT investment
 - Share information, even between disparate and/or legacy systems
 - Share office resources
 - Streamline and/or automate operations
 - Improve productivity
 - Manage and secure data
 - Improve communication
 - Harness the power of the Internet
- ... and much more. Visit our Web site at **www.vulcanlogic.com** for more information. Or contact us by email at **info@vulcanlogic.com** or by telephone at **(305) 865-4918** to discuss your needs and schedule a free consultation.

Vulcan Logic Business BASIC solutions: Support for new and/or legacy applications

Although there are no hard figures available, it has been estimated that more than two million computer systems around the world presently use

Business BASIC applications, often in conjunction with other applications.¹ Today, some of the most popular widely used accounting packages for small and medium businesses (i.e. Open Systems Accounting Software[®]+) are written in some flavor of Business BASIC. So are popular applications written for the construction, automotive and banking industries, to name just a few. Many Business BASIC application OEM's offer their products through dealer networks around the world. The vast majority of Business BASIC users don't even know the software running on their machines is written in Business BASIC.

In this age of mergers and acquisitions, many companies often find themselves having to incorporate Business BASIC systems into their existing networks, and maintain and modify them. Other companies may need to share data between systems that include Business BASIC applications.

Maybe your company has a custom-written Business BASIC application. Over the years, the application has acquired all the business rules needed to run your business. It may work perfectly for your business, but could be enhanced or updated. We can help.

Count on Vulcan Logic for Business BASIC support

Vulcan Logic has over 12 years of experience developing and maintaining systems written in Business BASIC. Specializing in the BBx[®] family from BASIS International Ltd. (BBx[®], PRO/5[®], VPRO/5[®], BBj[®]), we can develop, customize and maintain business applications for just about any industry. We can:

- Support, enhance and maintain your Business BASIC applications;
- Integrate new Business BASIC applications into your existing systems;
- Open your Business BASIC data to other applications and/or the Internet and e-commerce;
- Migrate older applications to newer Business BASIC platforms and GUI;
- Convert/export your legacy Business BASIC data to another application;
- Train your in-house programming staff unfamiliar with Business BASIC coding and applications.

Our talented development team is ready to tackle your Business BASIC project.

For More Information

Visit www.vulcanlogic.com/solutions for more information on Business BASIC and how Vulcan Logic can help your business. Our staff will also be happy to answer any questions you may have about any of our services. Contact us by email at info@vulcanlogic.com or by telephone at **(305) 865-4918** to discuss your needs and schedule a free consultation.

What is Business BASIC?

Business BASIC is an interactive programming language developed for minicomputer systems in the early 1970s. Derived from the original Dartmouth BASIC, Business BASIC extended the language concepts by introducing file access methods similar to those available to COBOL programmers. This made it possible to develop sophisticated business applications on minicomputers, which made computer technology much more affordable to small and medium businesses.

Interactive in nature, Business BASIC interpreters also offer extensive diagnostic capabilities, permitting developers to resolve live problems through telephone support without constantly having to ship updates. The interpretive nature of Business Basic also enhances development efforts through permitting quick testing and debugging of code.

Although Business BASIC started out as a proprietary language offered only by minicomputer vendors, each with its own variation, all modern Business BASICs have been ported to numerous operating systems. Unix is the most popular platform of choice among Business BASIC vendors, with DOS and Windows networks running a close second in providing platforms for Business BASIC applications.

Many Business BASICs are now graphical programming languages. Several of the Business BASIC vendors have also offered 4GL tools which work with their customers' more traditional Business BASIC applications. Some vendors are providing links to other file systems, such as Informix C-ISAM, Microsoft SQL Server and ODBC.

Because of its long history and the constant improvement of the language, Business BASIC is still a widely used platform for business applications worldwide.
